

Seismic Attributes - from Interactive Interpretation to Machine Learning

Kurt J. Marfurt

Multiattribute Analysis using Visual Decision Making

Multiattribute Analysis Tools

Interpreter-Driven Multiattribute Analysis

Visual Decision Making

- Crosscorrelation Maps 
- Corendering
- Spreadsheets
- Crossplotting and Geobodies
- Connected Component Labeling

Projection Techniques

- Principal Component Analysis
- Independent Component Analysis

Statistical Analysis

- Analysis of Variance (ANOVA, MANOVA)
- Multilinear Regression
- Kriging with external drift
- Collocated co-kriging

Machine Learning Multiattribute Analysis

Unsupervised Learning

- K-means
- Gaussian Mixture Models
- Kohonen Self-Organizing Maps
- Generative Topographical Maps

Supervised Learning

- Probabilistic Neural Networks
- Multilinear Feedforward Neural Networks
- Support Vector Machines
- Random Forest Decision Trees
- Generative Adversarial Networks

Multiattribute Analysis Tools

Interpreter-Driven Multiattribute Analysis

Visual Decision Making

- Crosscorrelation Maps
- Corendering 
- Spreadsheets
- Crossplotting and Geobodies
- Connected Component Labeling

Corendering three fault-sensitive attributes using CMY

Corendering coherence and most-negative curvature

Coherence: highlights lateral discontinuities

Most-negative curvature: highlights synclinal features

Corendering coherence and most-negative curvature

Neg  Pos Low  High

Interactive clustering using visualization

Corendering coherence, most-positive, and most-negative curvature

Interactive clustering using visualization

Correlation of bowl shape component with collapse features

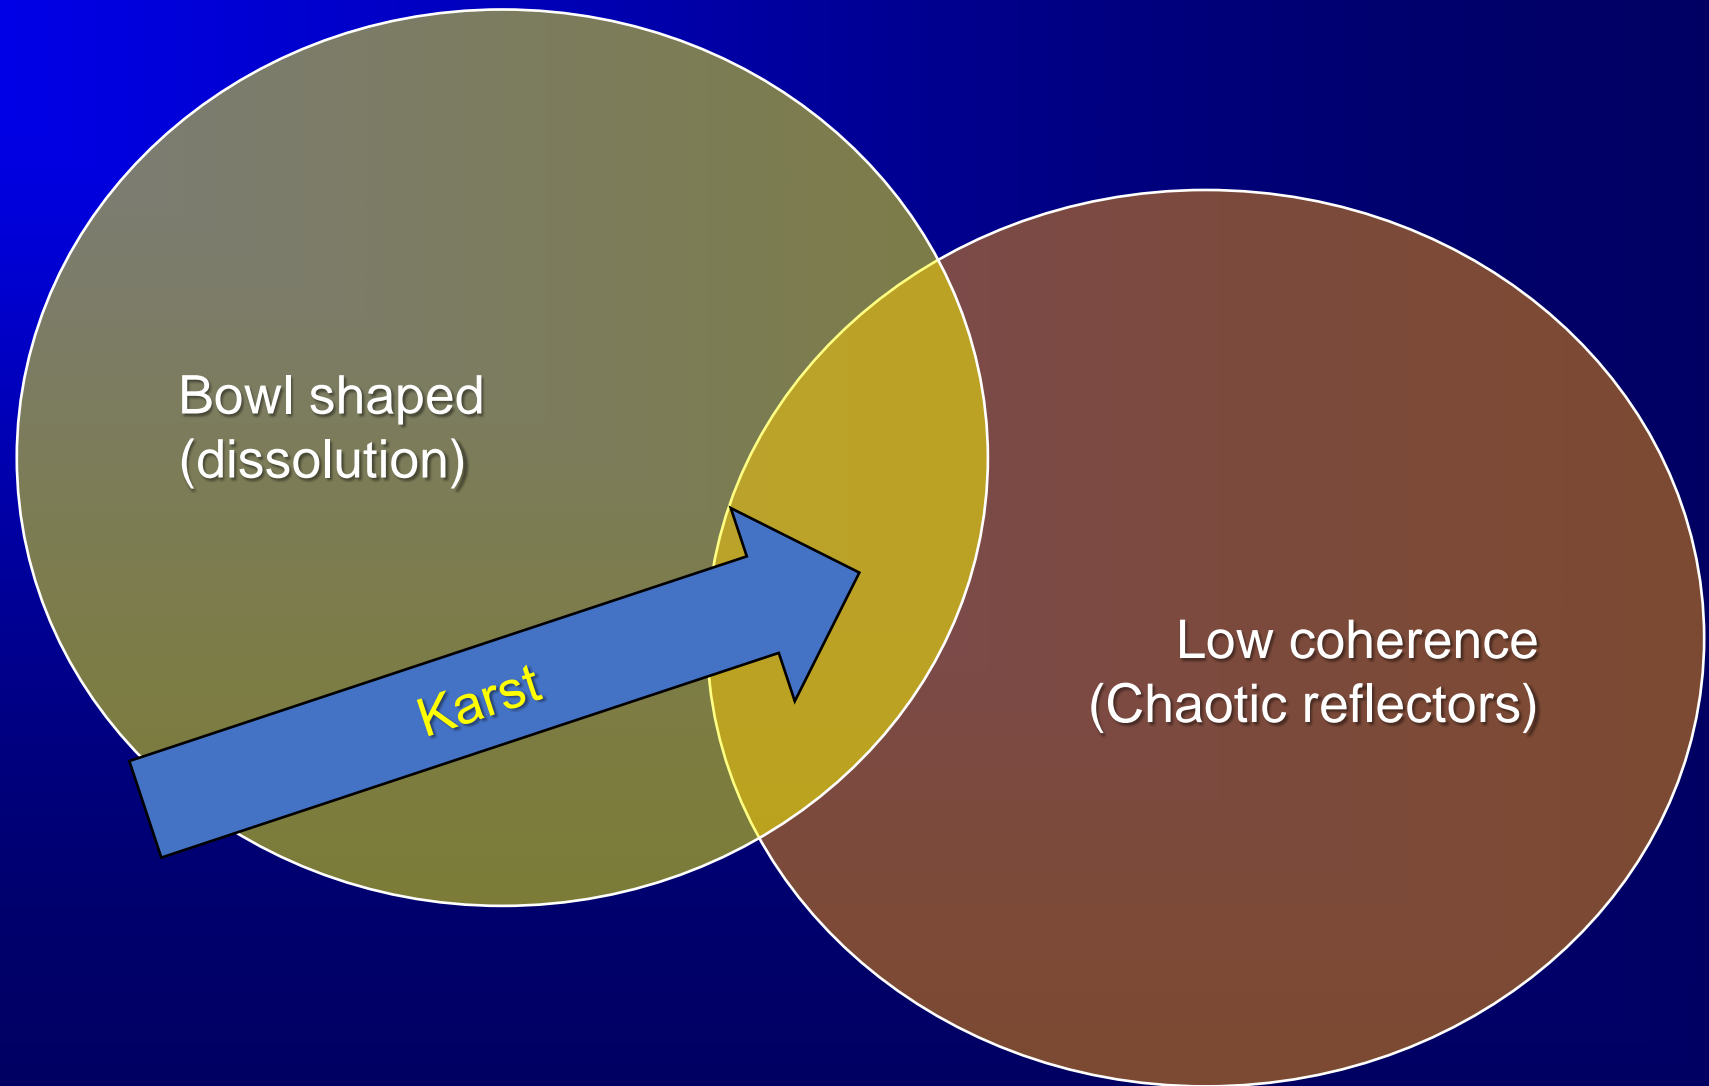

Correlation of bowl shape component with collapse features

Interactive clustering using visualization

Multiattribute Analysis Tools

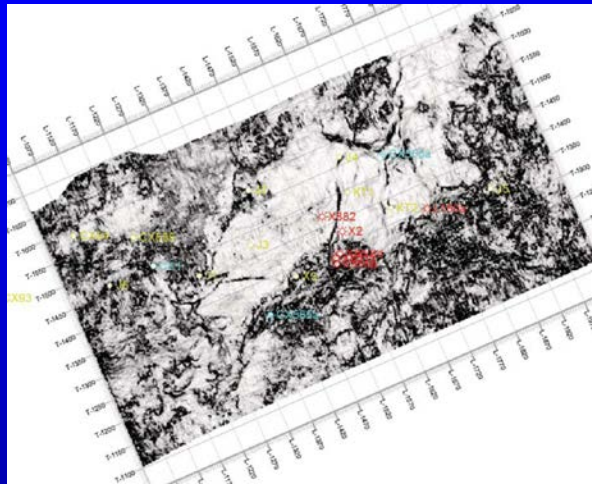

Interpreter-Driven Multiattribute Analysis

Visual Decision Making

- Crosscorrelation Maps
- Corendering
- Spreadsheets 
- Crossplotting and Geobodies
- Connected Component Labeling

Clustering using a spread sheet (common exploration risk analysis)

Mapping fractures in a Sichuan carbonate reservoir

P-wave coherence

P-wave most-positive curvature

P-wave AVAz anisotropy

Shear wave time thickness difference

Section	Sand	Curvature Attribute		S-wave Splitting		P-wave Azimuthal Anisotropy	Coherency
		Class 1	Class 2	Class 1	Class 2		
Xujiahe Member 4	TX ₄ ⁸	>5	>7				<60
	TX ₄ ⁹						
Xujiahe Member 2	TX ₂ ²	>3	>2.6	Blue zone	Blue + green zone	>1.06	<50
	TX ₂ ³	>3	>2.6				
	TX ₂ ⁴	>3	>2.6	Blue zone	Blue + green zone	>1.09	
	TX ₂ ⁵	>3.6	>3				
	TX ₂ ⁶	>4.6	>4				
	TX ₂ ⁷	>6	>5				

Risk analysis table

Multiattribute fracture prediction
(Jianming et al., 2009)

Multiattribute Analysis Tools

Interpreter-Driven Multiattribute Analysis

Visual Decision Making

- Crosscorrelation Maps
- Corendering
- Spreadsheets
- Crossplotting and Geobodies
- Connected Component Labeling

Scatterplots of spectral decomposition extractions

8 Hz

20 Hz

Interactive clustering (good for 2 at a time!)

Spatial distribution of a 'cluster'

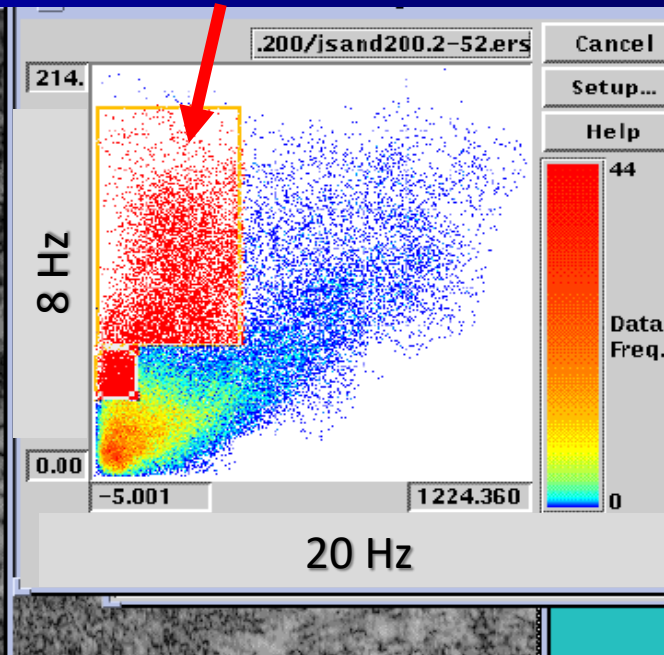

8 Hz

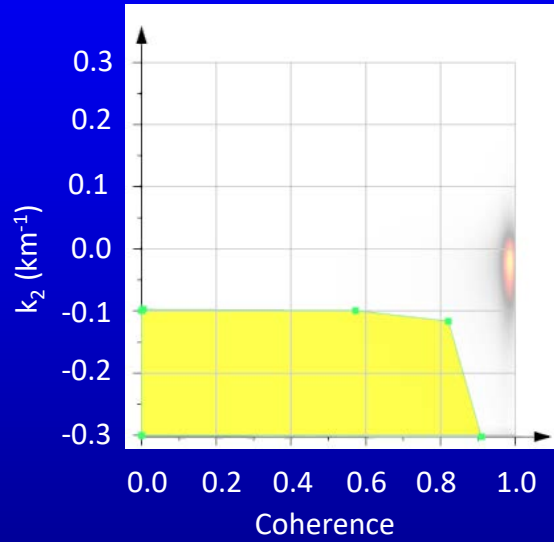

20 Hz

User highlighted 'cluster'

Crossplotting 2 attributes using a 2D histogram

Crossplotting
3 attributes by
applying opacity to
each histogram

(Marfurt, 2018)

Crossplotting
3 attributes by
applying opacity to
each histogram

(Marfurt, 2018)

Crossplotting 3 attributes using by applying opacity to each histogram

Reject 0°-25° dips

0° Dip magnitude 70°

Reject 0.0-0.15 entropy

0 Entropy 0.2

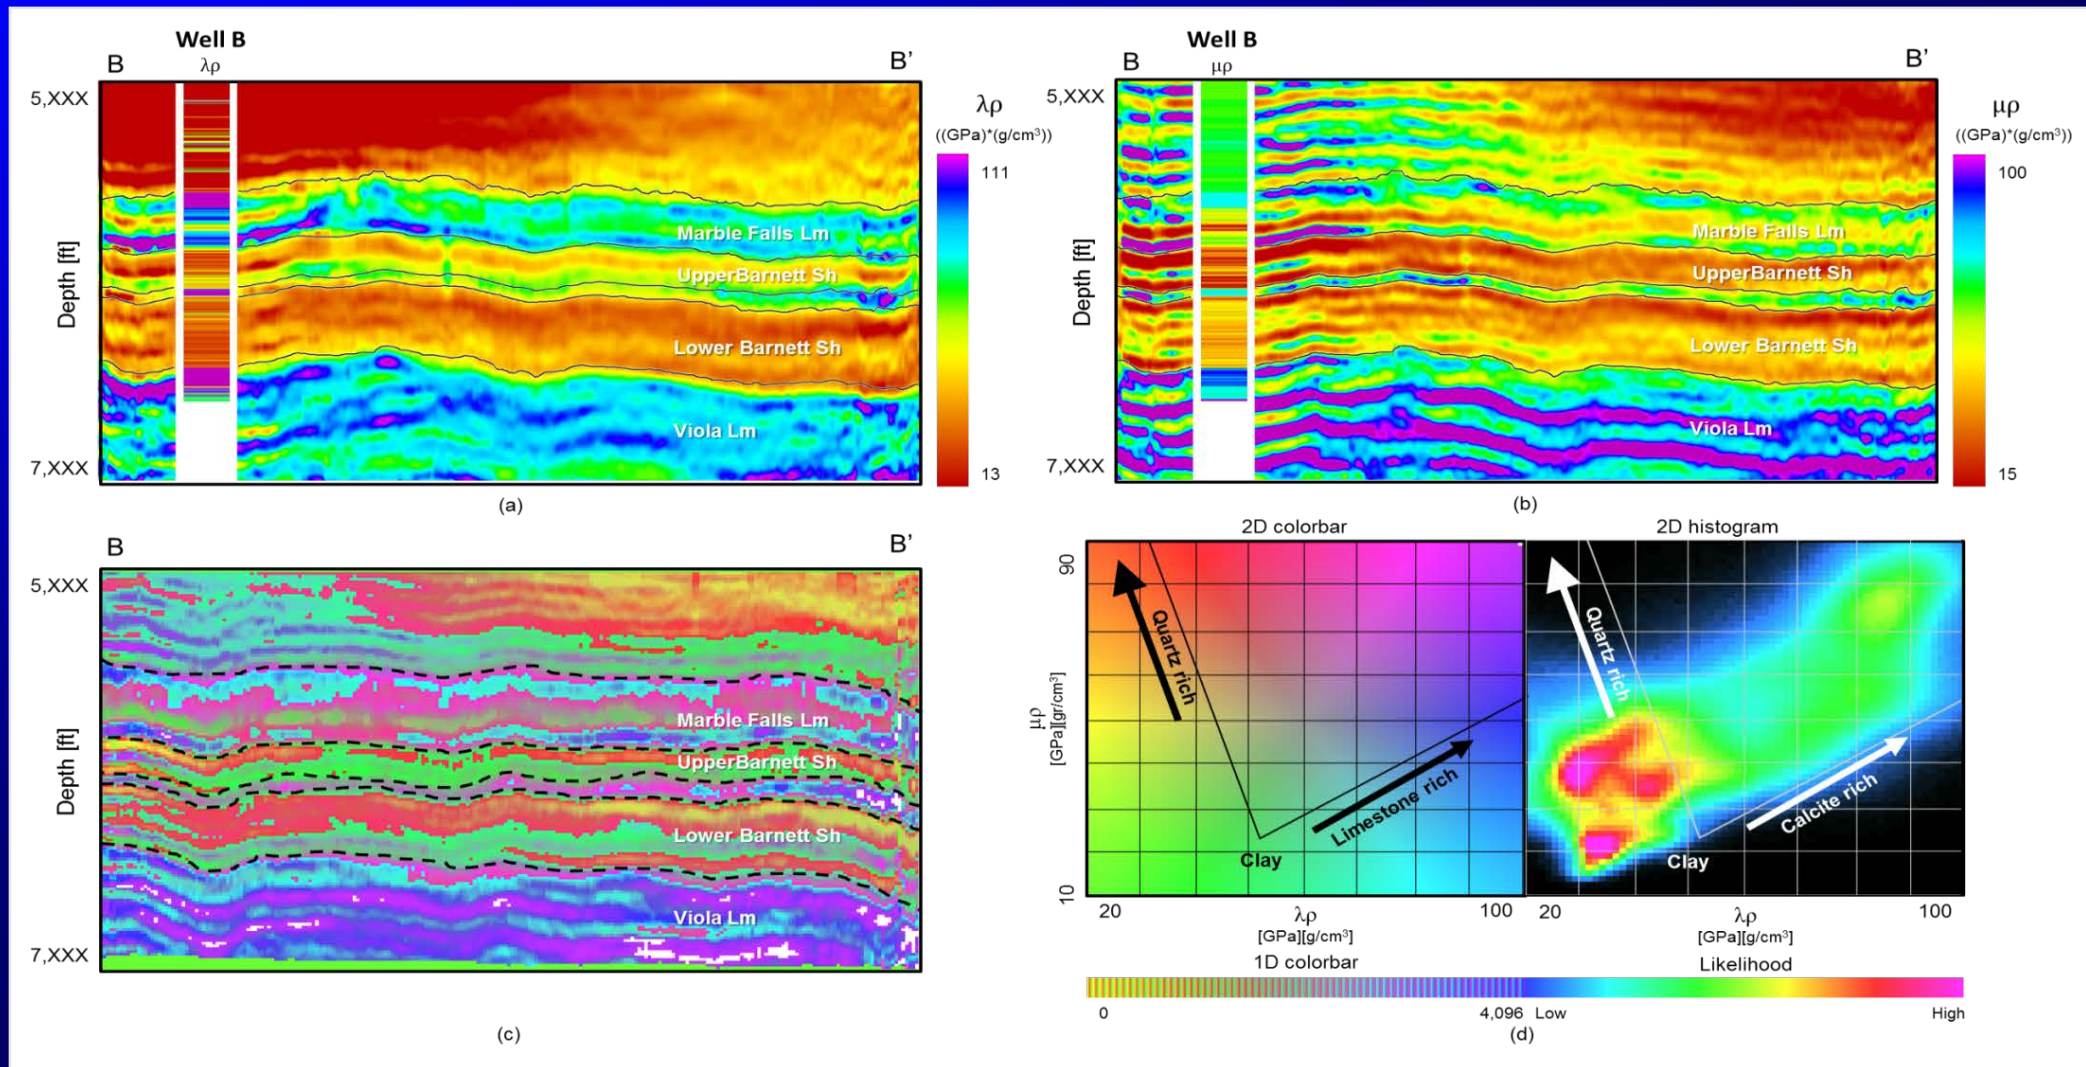

Reject 0-1000 peak
spectral magnitude

0 Peak magnitude 10000

Using a 2D color bar to crossplot $\lambda\rho$ vs. $\mu\rho$ to estimate mineralogy

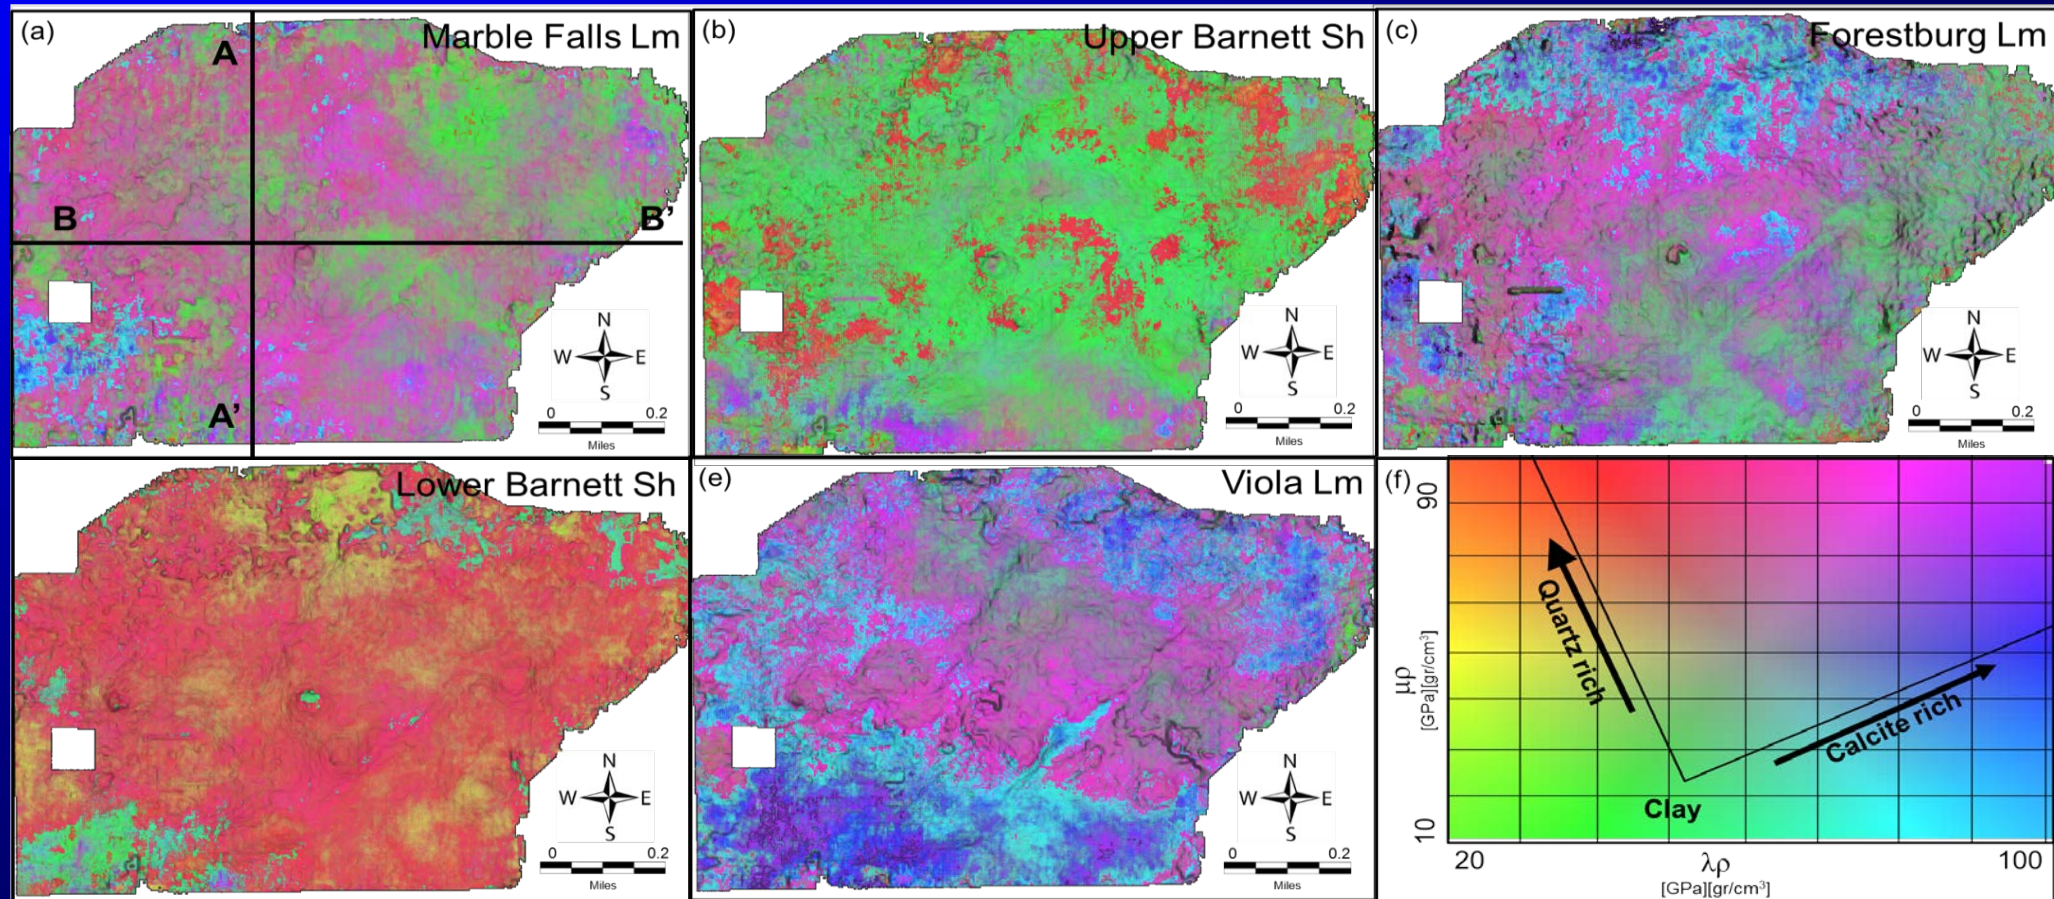

Vertical slices through the Barnett Shale sequence

(Perez and Marfurt, 2015)

Using a 2D color bar to crossplot $\lambda\rho$ vs. $\mu\rho$ to estimate mineralogy

Stratal slices through the Barnett Shale sequence

Building a petrophysical template using well log control

Building a petrophysical template using well log control

Brine sand probability

Using Bayesian classification to predict lithology and fluid facies

Hydrocarbon sand probability

Shale probability

Multiattribute Analysis Tools

Interpreter-Driven Multiattribute Analysis

Visual Decision Making

- Crosscorrelation Maps
- Corendering
- Spreadsheets
- Crossplotting and Geobodies
- Connected Component Labeling

Connected Component Labeling (CCL) (Karst dissolution)

Input attributes include coherence , spectral components, and conformity of vector dip.

Connected Component Labeling (CCL) (A turbidite flow)

3 spectral component geobody detection using opacity

1. Co-render 3 attributes against RGB
2. Draw a polygon on a 2D slice to define a region of interest
3. Interpolate colors with the polygon using a diffusion operator
4. Set all colors in the polygon to be opaque, all others to be transparent

3 spectral component geobody detection using opacity

Envelope

Geobodies from thresholding envelope

RGB spectral components

Geobodies from thresholding RGB values

(Henderson et al., 2008)

Machine learning using visual decision making

In Summary:

- Combining attributes can provide information that exceeds that of each attribute viewed separately.
- Simple clustering can be achieved through color blending and opacity.
- Modern interactive cross-plotting tools allow human-driven clustering of 2 or 3 attributes with well control.
- Interactive clustering is a key component of 'exploratory data analysis', which is the first step in more quantitative analysis techniques.
